

Choose Life Grow Young with HGH

From the landmark book by Dr. Ronald Klatz, the president of the American Academy of Anti-aging medicine comes the most powerful, over-the-counter health supplement in the history of man. Human growth hormone was first discovered in 1920 and has long been thought by the medical community to be necessary only to stimulate the body to full adult size and therefore unnecessary past the age of 20. Recent studies, however, have overturned this notion completely, discovering instead that the natural decline of Human Growth Hormone (HGH), declines from ages 21 to 61 (the average age at which there is only a trace left in the body) and is the main reason why the the body ages and fails to regenerate itself to its 25 year-old biological age.

Like a picked flower cut from the source, we gradually wilt physically and mentally become vulnerable to a host of degenerative diseases, that we simply weren't susceptible to in our early adult years.

Modern medical science now regards aging as a disease that is treatable and preventable and that "aging", the disease, is actually a compilation of various diseases and pathologies, from everything, like a rise in blood glucose and pressure to diabetes, skin wrinkling and so on.

All of these aging symptoms can be stopped and rolled back by maintaining Growth Hormone levels in the blood at the same levels HGH existed in the

blood when we were 25 years old. Growth Hormone, the first synthesized in 1985 under the Reagan Orphan drug act, to treat dwarfism, was quickly recognized to stop aging in its tracks and reverse it to a remarkable degree. Since then, only the lucky and the rich have had access to it at the cost of \$20,000 US per year.

Many in hollywood's glamour sets, who never seem to age like you or I, have a special secret to tell, and even space pioneer and US Senator John Glen stays vital with HGH.

The next big breakthrough was to come in 1997 when the American Anti-aging Society, a group of doctors and scientists, developed an all-natural source product which would cause your own natural HGH to be released again and do all the remarkable things it did for you in your 20's. Now available to every adult for about the price of a coffee and donut a day.

GHR is making its debut in Canada, just in time for the aging Baby Boomers and everyone else from age 30 to 90 who doesn't want to age but would rather stay young, beautiful and healthy all of the time.

The new HGH releasers are winning converts from the synthetic HGH users as well, since GHR is just as effective, is oral instead of self-injectable and is very affordable.

GHR is a natural releaser, has no known side effects, unlike the synthetic version and has no known drug interac-

tions.. Progressive doctors admit that this is the direction medicine is seeking to go, to get the body to heal itself instead of employing drugs. GHR is truly a revolutionary paradigm shift in medicine and, like any modern leapfrog advance, many others will be left in the dust holding their limited, or useless drugs and remedies.

It is now thought that HGH is so comprehensive in its healing and regenerative powers that it is today, where the computer industry was twenty years ago, that it will displace so many prescription and non-prescription drugs and health remedies that it is staggering to think of.

The president of BIE Health Products, the Canadian distributor, stated in a recent interview, "I've been waiting for these products since the 70's. We knew they would come, if only we could stay healthy and live long enough to see them! If you want to stay on top of your game, physically and mentally as you age, this product is a boon, especially for the highly skilled professionals who have made large investments in their education, and experience. Also with the state of the health care system in Canada, which appears to be going into serious decline, it is more important than ever to take pro-active steps to safeguard your health. Continued use of GHR will make a radical difference in your health,

HGH is particularly helpful to the elderly who, given a choice, would rather stay independent in their own home, strong healthy and alert enough to manage their own affairs, exercise and stay involved in their communities. Frank, age 85 walks two miles a day, plays golf, belongs to a dance club for seniors, has a girl friend again and doesn't need Viagra, passed his drivers test and is hardly ever home when we call - GHR delivers.

HGH is known to reverse Hemorrhoids, Autoimmune Diseases, Macular Degeneration, Cataracts, Fibromyalgia, Angina, Chronic Fatigue, Diabetic neuropathy,, Hepatitis C, Chronic Constipation, High Blood Pressure, Sciatica, Asthma and Menopause symptoms, helps Kidney Dialysis, and heart and stroke recovery.

"NEW" Doctor Recommended

The Reverse Aging Miracle

RELEASE YOUR OWN GROWTH HORMONE AND ENJOY:

- Improved sleep & emotional stability
- Increased energy & exercise endurance
- Loss of body fat • Increased bone density
- Improved memory & mental alertness
- Increased sexual potency
- Increased muscle strength & size
- Reverse baldness & color restored
- **Regenerates Immune System**
- Strengthened heart muscle
- Controlled cholesterol
- **Normalizes blood pressure**
- Wrinkle disappearance
- Reverse many degenerative disease symptoms
- Heightened five senses awareness
- Increased skin thickness & texture

All Natural Formula

This program will make a radical difference in your health, appearance and outlook. In fact we are so confident of the difference GHR can make in your life we offer a 100% refund on unopened containers.

A natural anti-aging supplement for your patients...

GHR Growth hormone **RELEASING** factor

Secretion of Human Growth Hormone (HGH) decreases with age in both men and women (somatopause). HGH modulates the action of other hormones. Stimulating the secretion of HGH in older adults (whose pituitary glands release insufficient amounts) can prevent and reverse many aspects of aging.

By age 35, the HGH levels decrease rapidly, and by age 60 a minor trace is being released.

IN ADULTS AND SENIORS, INCREASING THE HGH LEVELS HAS BEEN FOUND TO:

- lose the body fat which increases with age^{1,3,8,10,12,16,17,25}
- Improve pulmonary function in patients with chronic lung disease²
- Increase energy levels and exercise endurance^{4-6,8,17}
- Increase muscle protein synthesis^{1,5,8,10,12,15-17,19,23} and strength
- Lessen LDL cholesterol^{3,8,11,16,17}
- Improve cardiac muscle performance^{4,25}
- Improve the early and middle stages of sleep^{7,8,13}

- Improve cognitive memory function and alertness^{14,22}
- Increase lumbar vertebral and cortical bone mineral density, preventing osteoporosis^{1,6,8,9,12,15-17,20,24}
- Improve immuno-resistance^{15,21}
- Improve skin turgour, reverse baldness, restore hair colour^{1,23}
- Improve sexual libido and performance²³
- Increase insulin sensitivity^{23,25}

HGH levels correspond to the levels of its biologic messenger, insulin-like growth factor I (IGF1).^{10,20,25,26,28,29} Lifespan depends on heredity, environment, and lifestyle. Increasing HGH levels prevents frailty and loss of independence, and adds quality years to life.^{28,30,31}

What is GHR?

GHR contains certain amino acids which **stimulate** the anterior pituitary to **secrete** HGH. GHR does not contain hormones, is a safe natural product, and is a releaser of HGH.

GHR is taken as 4 capsules once a day to normalize HGH levels (larger amounts cause no greater release). A nutritious diet and exercise accentuates the full action of GHR.

HGH is injected, costly, and could be excessive. GHR is effective orally, affordable, causes no excess secretion, and has no known side-effects and no reported drug interactions.

Ingredients: each capsule contains:

Anterior Pituitary bovine source	20mg
Hypothalamus	5 mg
Amino acid blend (essential amino acids)	300 mg
Lysine	Proline
Histidine	Glycine
Arginine	Alanine
Aspartic acid	Cystine
Threonine	Valine
Serine	Methionine
Glutamic acid	Isoleucine
Leucine	Tyrosine
Phenylalanin	
Phylosterol Complex	10 mg
Beta sitosterol	
Campesterol	
Stigmasterol	
Soy Phosphatide Complex	20 mg
Phosphatidyl serene 40%	
Phosphatidyl ethanolamine	
Phosphatidylinositol	
Panax Ginseng	20 mg

Available as 3 bottles (one per month), as a 90 day supply. 100% refund is offered on unopened bottles.

A totally natural product of
Global Health Products

Note: High intake of sugar, alcohol and smoking can inhibit HGH release. Diabetes is often helped; however, the monitoring and care of a physician is essential.^{23,25,27}

Since hormonal activity increases with pregnancy, hormone-releasers are unnecessary and undesirable in pregnancy.
